FINAL LIGHT

Game by Sarah Brown

Art by Camille Barbieri & Sarah Brown

The full Final Light Core Book and adventures are available at questadon.com.

GETTING STARTED

A WORD TO THE GAME MASTER

Final Light is created to be easy to say yes to. Players you invite should be able to sit down (with no prep) and have a great first session that gives them confidence in the mechanics, gets them feeling the feelings, and leaves them wanting to play again.

This means the load on the GM is a bit heavier to learn the rules of the game beforehand, since you'll be teaching the game to your players.

But the GM's main role is not to memorize mechanics. Final Light is for telling stories with rich role-play, drama, horror, and connection. Your main responsibility is to take the lead on making that happen. Provoke decisive character moments, present choices that connect to your players' personal stakes, and immerse your players in the setting and events happening to them. These are things that belong to the whole table to do, but your players will be looking to you to set the tone and model it.

Your Role in Encounters: Encounters are the most mechanically heavy part of the game. But once they are set up, the GM does not need to make many choices along the way—the dice (and your players) decide most of what happens next. So the GM's real job here is to create tension, fear, and a sense of building urgency to escape. Don't shy away from things going terribly wrong. Push your players towards their Personal Stakes mechanics. Remind them about Light.

Your Role Outside Encounters: For the high adrenaline segments to matter, there needs to be a baseline to return to. While your table is inhabiting their character and navigating the world, as the GM you get to think about how to keep their characters telling a good story together:

- What beautiful moment would connect with this character?
- What topic can arise that will subtly provoke one of the characters' Personal Stakes?
- Why would these people bother trying to save each other?

Make sure each person has time to shine, and try to draw them towards at least one of the other characters.

In this quickstart, Local Anaesthetic opens in an Encounter, and—depending on how events unfold—might resolve through some narrative play. As you take your players through this session, look for which stories are asking to be told. Zombie stories are only really scary once you've started to care about the people.

PRE-SESSION PREP

Assign a pregenerated character sheet and Personal Stakes to each of your players (see the back of this book). Send them a screenshot or the full page one-on-one so they can ask any questions and think about it in advance, reminding them that the Personal Stakes are secret from the rest of the players and that you'll be teaching the whole game while you play.

Remind them what to bring to the session (2d20, 4d4, 6d6, a pencil and eraser, and a coin). If their Personal Mechanic requires a specific die, remind them to bring that as well.

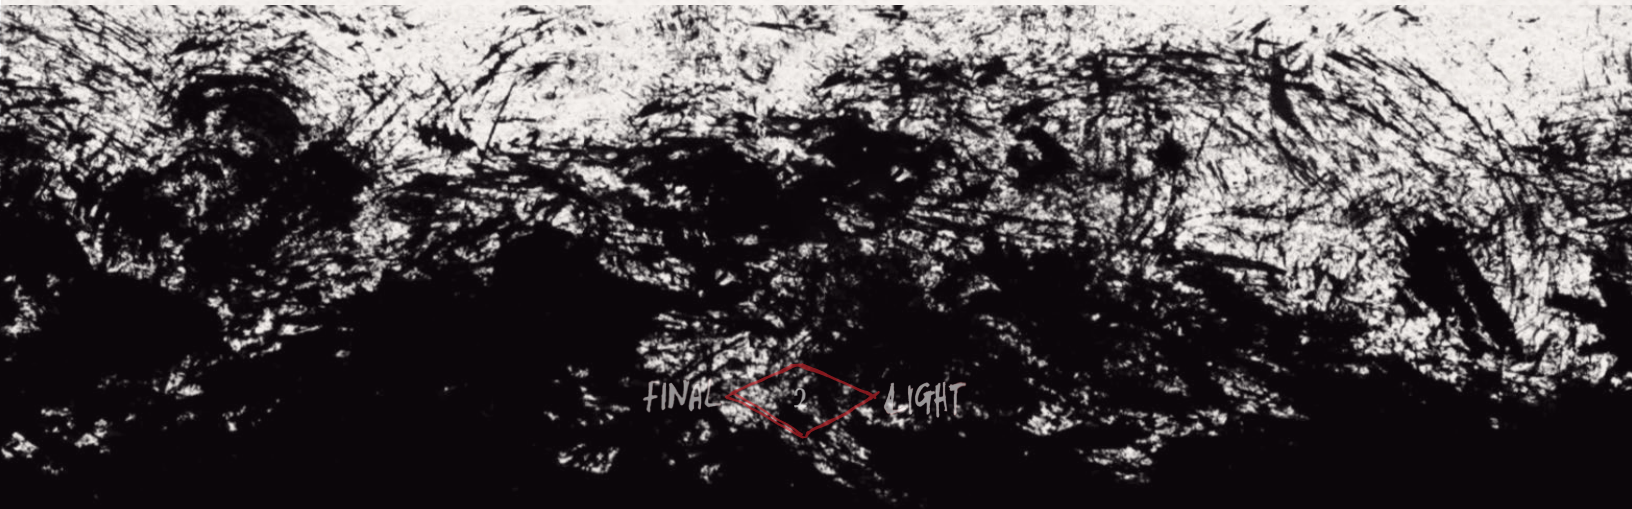

AT THE TABLE

At your first session together, before beginning your story together, give your players a refresher on the game you're about to play. You could read aloud the second page of the Quick Start Rules, or this.

Final Light is a post-apocalyptic game set six years after a rogue AI fabricated and released a blood-borne pathogen that almost eradicated humanity. In an attempt to stop it, all society went dark, bombing out cities and data centres in an event known as the Blackout. More than half the world's population are now mutated creatures who hunt humans to spread the infection. Millions more died.

You, the few survivors, have been fleeing and trying to build safe communities where you can. You have lost a lot along the way… maybe too much. You are aware you still have more to lose.

As we tell this story together, remember we are not telling a story about heroes. Each of you enters this story carrying things with you... for better or for worse.

Hand out the character sheets (as per the pre-session assignment of Personal Stakes), remind the players to keep the bottom portion folded under, and briefly give an overview of the various sections of the character sheet.

Character Sheet Orientation:

1. Go through the skills along the top quickly, noting the base skills and composite skills.
2. Roll **2 Scavenge checks** to determine any starting materials and items. They can craft from the materials immediately if they wish. *(Familiarize them with Scavenge checks, materials, crafting, and item storage.)*
3. Choose **2 weapons**. They should ready the weapon(s). *(Familiarize them with health levels, weapon types, Noise being undesirable, how readied slots and ammo work, and point out the Bite chart.)*
4. Gain **2 Light** and share why—what happened in the last couple days that gave your character hope? *(Familiarize them with what Light is and how to use it, prompt each person to reference their Personal Stakes for inspiration.)*

You can have them each share their character's name and background, and a bit about what the others might have noticed in the day or two since they've all met.

Begin.

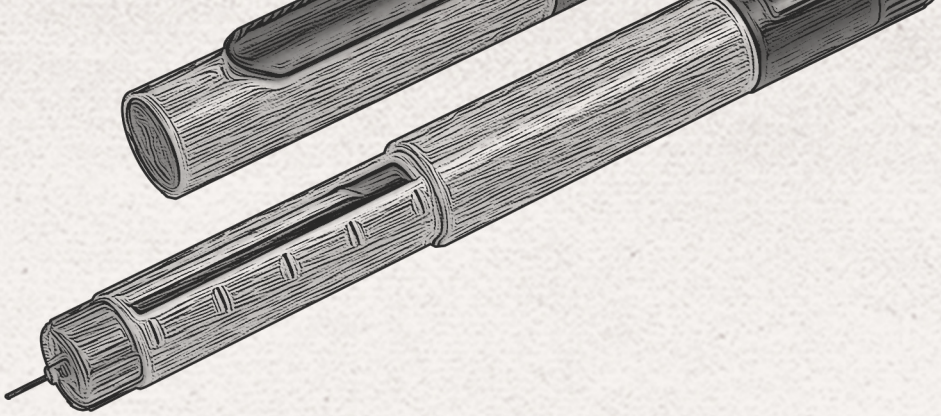

INFECTED TYPES

One last thing before we head into Local Anaesthetic: there are three common kinds of infected in the world. Remember, infected automatically succeed their attacks—the only way to avoid them is through protective gear or cover.

TYPE	HEALTH LEVELS	ATTACK TARGET	NOTES
Shrieker	1	11	Noise made within same or adjacent areas of it add +2 Danger instead of +1.
Runner	2	12	Moves TWO areas per Advance escalation; always bites.
Crusher	4	14	Beefy.

LOCAL ANAESTHETIC

OVERVIEW

You have recently found your way to **Cedar Court**, a small guarded settlement out in the suburbs. After a day or two of recovery, you're being sent out on a supply run with a Cedar Court representative—who will be evaluating what you newcomers are made of, and if the settlement is willing to take you in long term.

A contact recently passed word that a drugstore nearby was picked over from the front, but the pharmacy in the back was never reached. Cedar Court's medical ward could really use the supplies—it's a lead worth checking out. Get in. Get the medicine. Get back home in one piece. Easy enough, right?

This scenario starts immediately in the action—no preamble, no travel montage. The survivors begin in the entry to the pharmacy, with the rep quietly leading the way.

WHAT YOU'LL NEED

Whether you run this scenario digitally or physically, you'll need the following ready:

1. **Tokens:**
   - one for each player character (including you)
   - 3 different reserves of tokens for the infected (dice of 3 different colours or kinds work well for this)
   - 1 for the Evolved
   - A small reserve that can represent traps, wind-up decoys, and other items that get placed on the map (d4s can work well for this)
2. **Character Sheets (your players & you)** — **QS GM page 9+**
3. **Player References:**
   - A list of Weapons your players can choose from (or print them out so they can grab the ones they'll use) — **QS Rules page 8**
   - A list of Player Actions — **QS Rules page 12**
   - A list of items (craftable and non-craftable) and materials for Scavenge rolls and crafting — **QS Rules page 7**
   - The results table for spending Light — **QS Rules page 11**
4. **GM References**
   - The stat block for the Evolved — **QS GM page 7**
   - The stats for the 3 infected types — **QS GM page 3**
   - The list of Epic Items you can give out — **QS GM page 8**
   - The map (printed or drawn or digital) — **QS GM page 5**
   - A drawn or printed Danger Pool and d6s (player count + 1) — **QS Rules page 13**
   - A drawn or printed Evolved Tracker and something to mark progress — **QS Rules page 13**

THE GM'S CHARACTER (OBED)

You can create a character yourself just like your players do! But I also have a pregenerated character you can use for this scenario if you wish. His name is Obed, and I'll refer to Obed throughout this adventure in place of whoever you choose to play yourself. You'll find a pre-filled character sheet for Obed along with the other pre-gens later in this book.

Obed (Black male, early 50s) is the survivors' guide for this run. He often helps at Cedar Court with scouting and small supply runs. Before the Blackout, Obed was a delivery driver, but he's been doing this long enough to be calm about it.

Use Obed to lead the way into danger as your players get their footing. Obed is available as the GM's way to "go first" and show the other players how someone would engage with the world around them. He can initiate conversations, be the first to try a stealthy take-down of an infected, react to being bitten first, etc. Use him to help set the tone, and to "push" the players towards their Personal Stakes as needed.

THE MAP

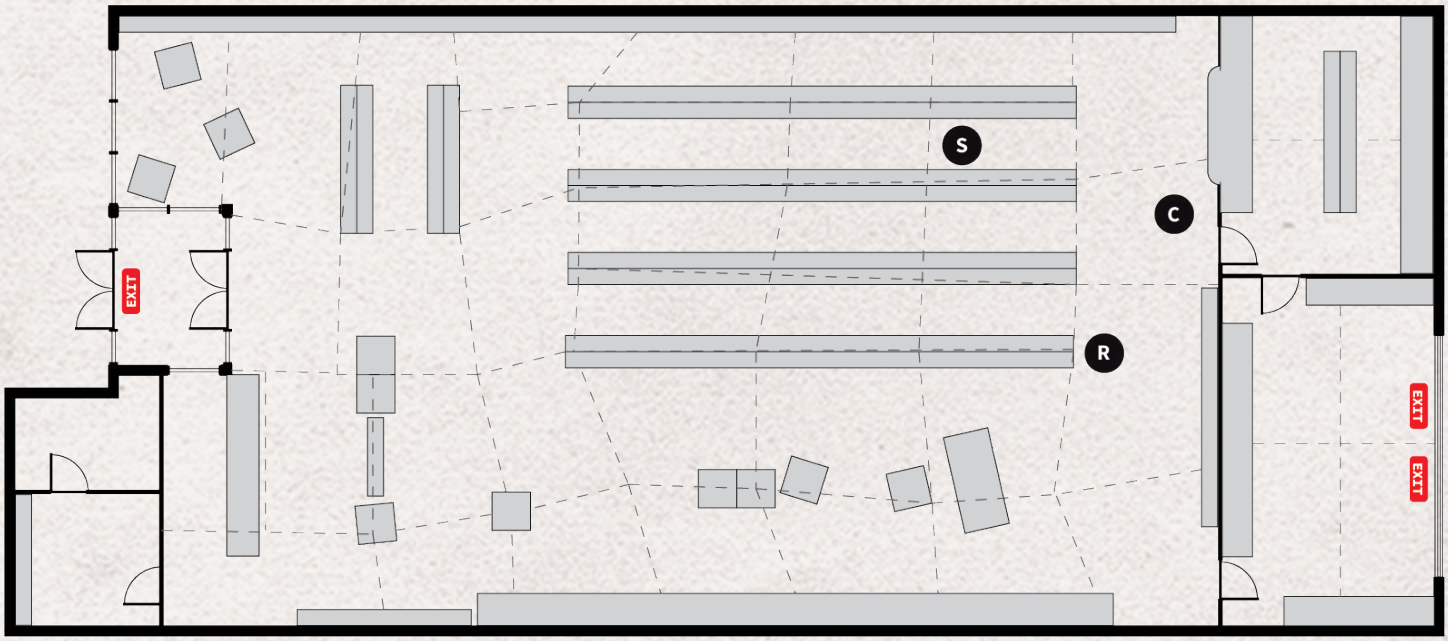

Draw this out before the session on paper (across 3 sheets) or a whiteboard. It can be rough!

The areas can be different shapes and sizes, but there should be approximately 10 areas from the front of the store to the back of the building. The back rooms should have 2-4 areas in each of them. Draw in shelving and displays within the main area to create things to hide behind while moving through. Indicate where the doors are. All the doors are closed to begin.

The front doors and the garage door at the back are **Exit areas** players can Escape from.

A Shrieker, Runner, and Crusher are there (their starting positions are marked) but don't put them out until people get close enough or do a high Awareness check.

The PHARMACY door (top right) has a sign above it, and there's an open counter to the side of the closed door. Both doors to the other room are labelled STAFF ONLY. Players won't be able to read either from the front of the store.

HIDDEN MODE

Open with the party already inside — crouched just past the entrance, Obed a step ahead. Read or paraphrase:

It's very quiet here. The front windows of the drug store let in enough grey afternoon light to see by—barely. Deeper in, the aisles dissolve into shadow. The shelves have been picked over. Packaging on the floor. Something smells like it used to be food. Obed turns back to look at you, then points toward the dark at the back of the store. He mouths: "Pharmacy. Quiet."

Movement tutorial: Show the players their Player Actions list. As players take their first actions, briefly explain area-based movement—one Move action gets you to an adjacent area, Sprint gets you two but makes Noise. Remind them that Noise creates danger.

Awareness check: Once players begin moving, any survivor can make an Awareness check. Explain to them that the Visibility is Dim (can only see 3 areas radius well). If they roll 18 or higher, give them a clue about there being infected in the building.

After everyone has taken a turn: Call for a group Stealth check. Before they roll, explain:

Right now you're in Hidden mode—the infected don't know you're here. If anyone makes Noise or if we fail the stealth roll, we move to Hunted Mode. The longer we can delay that happening, the higher chances you have.

Noise is danger

HUNTED MODE

The party will eventually trigger Hunted mode, either through a failed Stealth check, a noisy action, or wandering close enough to an infected that detection becomes inevitable. Let it happen naturally. Don't force it, but don't protect them from it either.

When Hunted mode begins: Pause and explain how rounds work—Spotlight Turns, their Action choices, Enemy Escalations, the Danger Pool. Keep it brief. The table will learn faster by doing.

From here, each of you gets a turn. You can do two actions on your turn. Then, after you've all acted, I get to do something with the infected. And at the end of every round, one die goes into the Danger Pool—when it fills up, something worse might show up. The longer you take to do this, the worse it's going to get. I also add a die to the Danger pool when Noise is made, so weigh the consequences, but also remember to play as your character—you'll have the most fun doing what's in character even if it might not be the most 'smart'.

Put out any of the three infected that might move into visibility range.

The Pharmacy: The pharmacy door requires the Interact action to open (it's unlocked). Once inside, a PC can look for the medicine by making an Awareness or Scavenge check (target 10). The supplies are there: pill bottles and vials, sealed packaging.

Epic Items: Remember, at any point in this session if a player rolls a 20 on a Scavenge check, they get an Epic Item. You can roll on the table below or pick one that seems the most fitting.

The Stock Room: The Staff Only door connects to the other back room—also accessible from the pharmacy via an interior door. It is Dark in there.

The **Horde Mind** is in this room. This is an Evolved infected. If a survivor enters the room, or if the Danger Pool triggers an Evolved, it wakes up. It does not move out of this room unless intentionally provoked.

The Stock Room also has a **garage door**—a possible escape route spanning two possible Exit areas. It can be opened with the Interact action and a Strength check, or whatever other creative means players come up with. This is where the survivors get out if the main entrance becomes blocked (which it likely will; newly spawned infected should enter through the front of the store).

Victory condition: The encounter ends when all PCs have escaped (via Exit areas) or been killed. Players don't need to kill the Horde Mind; they need to get out. Make sure players understand the Escape action, and that they can choose to get the meds or just save their own skin.

The Horde Mind

Health Levels: 12 | Difficulty to Hit: 12

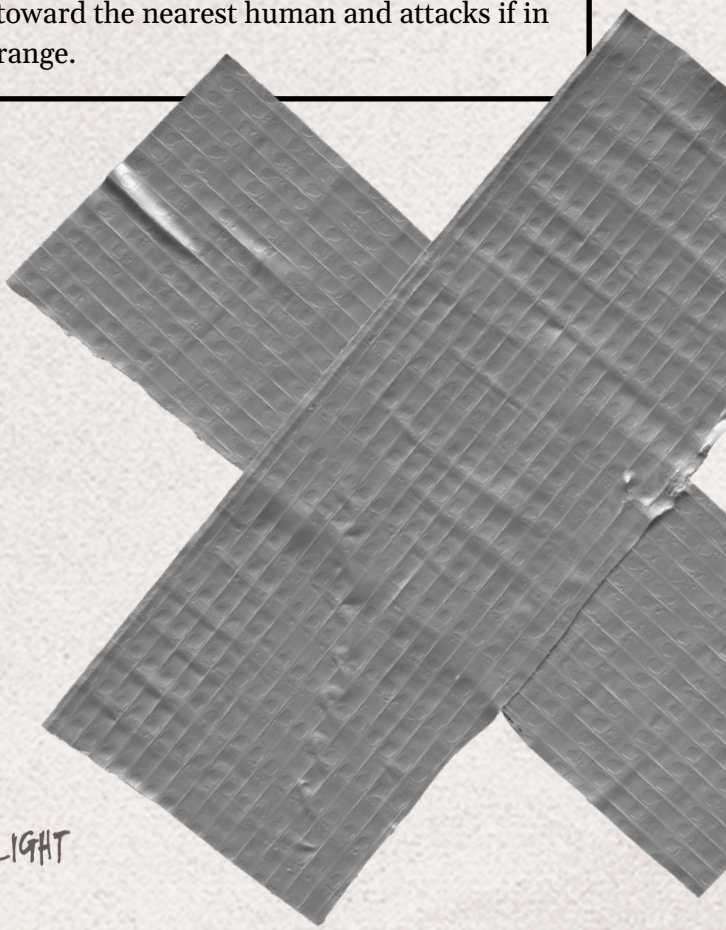

At first glance, it seems like a few infected are huddled together, but as your eyes adjust to the dark, you realize this is a single entity composed of 3-5 mutated humans melded into one misshapen torso. One arm is composed of several arms wrapped into one tree-trunk like limb, and on the other side, four separate arms emerge from one shoulder, with an extra forearm on one of them. Somehow, there is only one head. It blinks its two milky eyes, as if just awakening after a long sleep, then fixes its gaze on you.

ONGOING EFFECT

While awake and alive in an encounter, the GM gets 2 Enemy Escalations per round instead of 1.

MUTATION ABILITY

(When Evolved Track fills) Every infected on the map immediately moves one area toward the nearest human and attacks if in range.

RESOLUTION

If no one survived the encounter, that's a story too. Each player had a moment to share their final light as they died, so let the camera pan back to the front of the pharmacy, to the bodies of the fallen, on the medicine that was never delivered.

If player characters did successfully escape, give them a moment to breathe. A few blocks away, maybe in an alley, let the players know they're out of danger for the moment. Immediately prompt them to resolve or address something that happened back there—a death, a bite, betrayal, sacrifice. Encourage roleplay rather than simply pushing for "happy resolution".

Will Cedar Court welcome them back? Do they even go back to Cedar Court, or do they take the medicine and run?

If they successfully bring the medicine back to Cedar Court, they arrive at the walled-in suburban block: cars, plastic sheeting, garden fencing, improvised but functional. People shine lights on the party upon arrival. If Obed is still alive, he praises the party for a job well done and welcomes them back to Cedar Court.

Close the session by going around the table and asking each surviving player character one question:

"As your character goes to sleep tonight, what are they thinking about? Do they feel like there's a reason to keep going tomorrow?"

Feb 10 - they've got COFFEE!

EPIC ITEMS LIST

The following items can only be found with high Scavenge rolls. Either hand-pick what you'll give the player or have them roll a d6 to determine which epic item they get.

TYPE	EFFECT
RedDrink	Move 3 areas, because RedDrink gives you wings. 1 use.
Ammo Box	Upon finding this, or whenever you decide to unpack it, gain 3 Ammo.
Flamethrower - Melee Weapon	2 hands. Attacks all enemies in your area for 2 damage. Roll with advantage. Has 3 uses, cannot be refueled. Removes stealth. The area you're in catches fire next round.
Funkie Brownie	You are the world, you are the people. Advantage on Stealth, Disadvantage on Attacks. Lasts 3 rounds.
Tear Gas	Obscure 4 connected areas with gas. Makes these areas Hazardous. 1 use.
Superglue	Patch yourself up fast—heal one health level. Using this item does *not* cost an Action. 1 use.

PERSONAL STAKES

PROFOUND SILENCE

Your hearing is going. Fast. You noticed it a month ago. You've hidden it so far, compensating with other cues, but it's getting worse. How long before you become a liability? What will the group do when they realize?

On every Awareness check, any roll below your Impairment threshold is a failure, regardless of the GM's target.

Your threshold starts at 12. You can hear most conversation still, but everything is a bit muddy and you struggle to pick up quiet sounds.

STRAIN ○○○

IMPAIRMENT THRESHOLD

12 → 14 → 16 → 18

When a loud Noise is made in your area, mark 1 Strain. At 3 Strain, your threshold rises and Strain resets.

If a check relies purely on hearing, roll with disadvantage.

When your Impairment reaches 18, you have profound hearing loss. You have little to no usable hearing and must rely on lip-reading and sign language. Any hearing-based checks are automatic failures.

PERSONAL STAKES

EDGE OF PANIC

You've always been a bit anxious, but recently you experienced something awful and you just can't shake it. You feel like something might push you over the edge at any moment, and you're not sure what will happen when it does.

When in Encounters, anytime you're in the same area as either an enemy or a loud noise, roll a D6 and refer to the Panic Table.

Outside of Encounters in tense situations, the GM may require you to roll on this table as well.

PANIC TABLE

1. Nothing happens, you manage it.
2. Nothing happens, you are visibly shaken.
3. You scream, yell, or hit something near you in panic. Make Noise.
4. FREEZE - You lock up, catatonic. Lose 1 action point.
5. FLIGHT - You take off running. Roll a D4, with 1 as North, and move in the direction indicated.
6. FIGHT - You lash out blindly. Immediately attack the person or creature nearest to you (prioritize enemies, if present), using one of your readied weapons.

TERMINAL DIAGNOSIS

You were given months to live... months ago. Your timeline is almost up. Every sunrise is borrowed time. Do you tell anyone? What do you want to accomplish before the end?

MORTALITY
Final Days @ 20

Choose a "bucket list" goal that you want to accomplish before the adventure's end, and discuss with your GM. Write it in the space below.

At the start of every session, roll your Mortality Dice (2d12). Record the number secretly in the box to the left. If your total Mortality reaches 20, you're in your Final Days: every time you make a Strength check, if you roll 5 or lower on the die, permanently lose 1 health level.

Once per session, you may push yourself beyond normal limits: automatically succeed on a Strength check, but add +10 to your Mortality total.

If you achieve your Bucket List goal, gain advantage on all Mortality rolls and Final Days checks going forward.

PERSONAL STAKES

LONE WOLF

People can't be trusted. You've been let down enough to know you're better off on your own. But a small part of you wonders if it could be different… How do you work with the rest of the party? Do their actions serve to confirm your beliefs that you're better off on your own, or lead you to open up to something new?

You have advantage on ALL skill checks you make without the involvement or buy-in of the party. You have disadvantage on ALL group checks.

BETTER OFF ALONE

○○○○○

Any time a natural 1 is rolled by anyone during a group check, you receive one point on your Better Off Alone track.

Once the Better Off Alone track is full, you decide to leave the group permanently and must do so in whatever way feels most fitting.

FOUND FAMILY

○○○○○

Any time another party member rolls a natural 20, mark one "Found Family". You may also add a mark here if you have an experience that confronts your bias and opens your heart (GM approved).

Once the Found Family Track is full, your Better Off Alone track no longer applies, and previous advantage/ disadvantage rules are removed. You may now use the Found Family track by spending one point to give advantage to yourself or someone else.

PERSONAL STAKES

TRAVELLING WITH DAD

You are travelling with your elderly father, who has become a major liability. How do you respond to his fears (of putting you in danger, of physically failing himself and others)? How do you respond to your own fears (of how his condition endangers you, of what will happen if you can't protect him, of the possible resentment of others you are traveling with)?

Write your dad's name here: _____

Your father is a member of the party, but does not act "separately" or have his own stats—all the actions you take can be flavoured as either your dad or you taking them, and in encounters you act as a unit.

Whenever you roll a skill check, add an extra D20 of a particular colour/design to your roll. **This is your Dad Die.** Roll this die alongside your other D20, but if the die you use matches the number on your Dad Die (5% chance), tragedy strikes and your dad will die. If you rolled with advantage, you may elect to use the other die to avoid matching results (you may not do this with disadvantage).

You also have a choice: you may decide to sacrifice yourself to save your dad. If you do so, you will continue the adventure as your father, rolling all rolls at disadvantage.

PERSONAL STAKES

THRILL SEEKER

No one lives forever. Heck, most people don't even live past thirty at this point. You might as well make the most of whatever short time you have, right? A small, more self-aware part of you probably knows your antics endanger more lives than your own, but you can't think about that too long. Will your compulsion to feel alive win out? What will it cost you and those with you?

4
3
2
1
start here 0

The Adrenaline Meter starts at 0 at the beginning of each encounter and outside of encounters.

At 0: you have disadvantage on Stealth checks.

At 4: tell the GM immediately. Before the end of the round, they will present something irresistibly dangerous your character cannot refuse, and will spend your whole next turn doing.

The meter drops by 1 at the end of each round in an encounter.

The meter rises by 1 whenever you take an action that is an attack or creates Noise (to a maximum of 2 each round).

Growth: ○○○

If you spend Light while at 0, mark 1 Growth. At 3 Growth, gain +1 Stealth. The compulsion doesn't go away, but you've learned new ways to manage it.
